

Marketing Release

#11-19

CCW Air Barrier Products Pass Tough Industry Standards

Carlisle Coatings & Waterproofing recently created a sell sheet detailing the reliability of Barritech VP™, Barriseal and CCW-705 when measured against the tough industry standards set by ASTM E2357 (Standard Test Method for Determining Air Leakage of Air Barrier Assemblies). This useful new resource, called "Air Barrier Products Pass Tough ASTM E2357 Standards," explains the importance of the test, which certifies the reliability of air barrier products when used as part of full air barrier assemblies. It also details how the test results were achieved for each air and vapor barrier.

Click the link on the right to view a PDF of the sell sheet. The sell sheet is also available for download in the password-protected section of the [CCW website](#).

For your convenience, an e-copy of this and all other Marketing Releases can be found on our web site at www.carlisle-ccw.com in the password-protected area under "Marketing Releases."
